

National Severe Weather Warning Service

Chief Forecasters Assessment

Another area of low pressure is expected to move quickly east across the Atlantic, bringing another spell of heavy rain to western parts of the UK. Across western Scotland, north of the Central belt, around 40-60 mm of rain is expected to fall quite widely, with up to 100 mm possible over high ground. Across the rest of Scotland and Northwest England, rainfall amounts are likely to be lower, with 20-40 mm falling widely and up to 60 mm possible over high ground.

The Met Office have issued a **Yellow Alert of Rain**

Valid from **15:00 on Thu, 28th Jan 2016** until **18:00 on Fri, 29th Jan 2016**

Rain is expected to spread from the west during Thursday, gradually turning heavier and more persistent. The heaviest rainfall will be over high ground, initially across western Scotland, then developing across Northwest England during the early hours of Friday. Drier conditions, albeit with some showers, are expected to reach Scotland during Friday afternoon, but the rain may take until evening to clear Northwest England.

Be aware of the potential for further localised flooding and disruption to travel.

This is an update restrict the original warning area to Northwest England and Scotland and to bring forward the start time. Separate warnings will be issued for Wales, Southwest England and Northern Ireland.
